Workspaces Interior

Project selected:
Copernico Martesana

Location:
Milan, Italy

Year:
2017

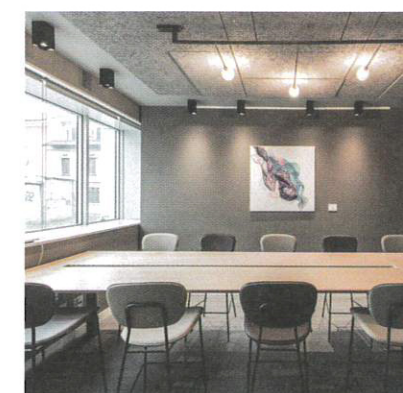

Project Description

Copernico Martesana is the top-grade implementation of the innovative architectural format created by Studio DC10 for Copernico 38, made for the new needs of the working world and of the new generations. The firm was engaged to deal with a building complex consisting of 3 disused buildings, an interesting and segregated. Despite the many constraints that characterised the pre-existing buildings, the project was able to revolutionize the perception of space through the creation of different "architectural events".

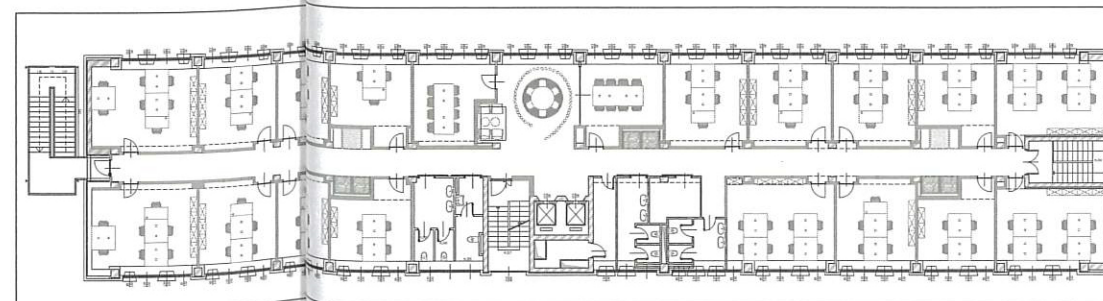

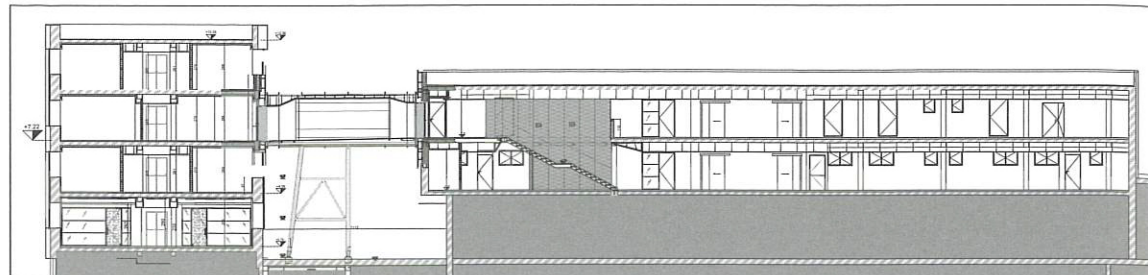

Combining office spaces and sharing places such as cafés, Oxygen Room, library, co-working, an entire level became a "social floor". The vertical connections are accentuated by multi-storey open spaces and the Social Floor offers different space typologies. The corridors are marked by comfortable relaxation areas and enhanced by dedicated graphics and lighting. The horizontal connection between the central building and the building dedicated to coworking is constituted by the cylindrical walkway: an iconic architectural element that, in its desired detachment from the pre-existence, reveals -even from the outside- the new soul of the building.

Inspired by the Nordic tradition, the interior design is distinctive for its industrial atmosphere and for the use of natural materials that result in a warm and familiar environment that can be adapted to different types of use.

With a broad portfolio of projects in Italy and abroad, Studio DC10 is a dynamic and innovative architectural firm that combines the creative and conceptual aspects with planning and economic appraisal. The firm, active for over fifteen years, is composed of about twenty architects, engineers and interior designers.

The three partners – Marco Vigo, Alessia Garibaldi and Giorgio Piliego – bring their individual experiences together to create a unique professional reality where the skills and expertise of each are seamlessly integrated and fully respond to the needs of a wide variety of projects. Studio DC10 is a reference for various multinational firms, luxury brands and major fashion and real estate companies. Over the years, clients have renewed their preference for Studio DC10, rewarding its quality, effective execution and originality in harmonising projects' structural, conceptual and technological aspects.
